## FINISHING SCHOOL

### *Choosing a lacquer.*

*All of the lacquers on this page have been tested and are safe for use on toys and nursery furniture.*

1 Acrylic Lacquer is a waterbased lacquer. Ideal for work on or off the lathe, it is touch dry in about 20 minutes and hard dry in two hours. It provides a tough clear coating and can be applied by cloth, foam brush or spray.

2 Acrylic Gloss Lacquer is an easy to apply bright gloss aerosol lacquer. Fully dried in 20 minutes it gives an extremely hard wearing gloss finish, suitable for use indoors or out and is ideal for those awkward to finish items.

3 Acrylic Satin Lacquer has all the properties of the gloss aerosol but with a softer, more subtle finish where lots of protection is needed without a bright finish.

4 Melamine Lacquer is a cellulose based product, touch dry in thirty seconds, workable after five minutes. It gives a bright gloss finish which cures once dry, achieving maximum durability after 28 days.

5 Melamine Gloss Lacquer, an aerosol version of the above, modified to allow delivery through the aerosol nozzle and ideal for all turned work and especially intricate and fiddly pieces.
