FINISHING SCHOOL

## *Hard Wax Oil*

1

1 Hard Wax Oil is a blend of natural oils and solvents to give a high-build, quick drying finish to bare wood. It is extremely tough and hard wearing and dries to a clear finish which can be built to a high gloss after 3 coats. It is toy-safe and ideal for use on table tops, coasters, bowls and many other items.

2

2 Before applying Hard Wax Oil ensure that the surface of the timber is clean and dry and sanded to a silky smooth finish.

3

3 Apply Hard Wax Oil with a cloth or brush, making sure to cover the whole area evenly and avoid any build up of oil in corners etc. The oil will flow out to remove minor brush marks and other blemishes.

4

4 Allow four hours for each coat to dry. Further coats can be applied after this time, lightly sand the surface to ensure a smooth foundation for the next application.

5

5 Three coats should be sufficient to achieve a hard wearing gloss finish, capable of resisting finger marks and water splashes etc.
