P R O D U C T S

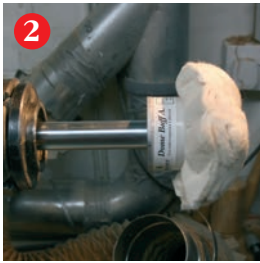

## FINISHING SCHOOL

### *Dome Buffs*

1

**1** To get the same buffed finish on the inside of a bowl as on the outside, the safest way is to use the Dome Buffs. These come in the same cloth grades, A, B and C as the wheels and use the same compounds and waxes, ensuring everything matches.

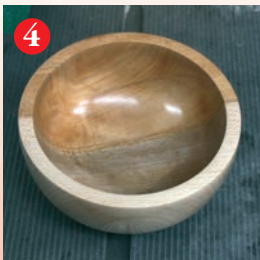

2

**2** The Dome Buffs screw onto the Large Mandrel, which allows for plenty of clearance away from the chuck. They can also be fitted into the Small Mandrel to be used on a power drill.

3

**3** For best results use all three Dome Buffs and relevant compounds and waxes, repeating the process used on the outside of the bowl. Use a slightly higher speed than for the wheels and allow a little more time for the shine to grow.

4

**4** The finished, buffed bowl. A bright shine with the protection of Carnuba Wax as the top coat or Microcrystalline Wax can be used if you prefer.

5

**5** Dome Buffs are available in three different sizes to cater for most requirements; Small (60mm), Medium (100mm) and Large (150mm).
