Buffering Tree

1 If you're doing a lot of buffering of small items it can quickly become tedious having to keep changing the wheels over. Introducing the Buffering Tree, which features all three wheels on one central spindle.

2 The tree fits into the standard mandrel and is supported by a live centre on the other end; simply screw it in and you're ready to go.

3 The best way to use the Buffering Tree is to load all three wheels with compound or wax before you start buffering. Remember to take care not to overload the middle wheel.

4 Use the speed you feel most comfortable at, 1000-1300rpm is a good starting point. Be sure to keep a tight grip on the item you are buffering and always work in the bottom quarter of the wheel nearest to you.

5 Buffering your work is a great short-cut to a fine finish. Bring out the best in your creations with the Buffering Tree.

5 Buffing your work is a great short-cut to a fine finish. Bring out the best in your creations with the Buffering Tree.

(Designed as an add-on to our Buffering Wheel Kit, the mandrels and compounds are not included but are available separately).
